

Corral Panels

One of the heaviest on the market today.

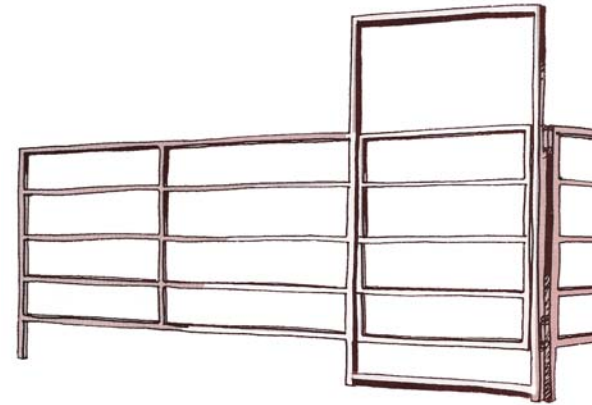

Our sturdy corral panels are made of 1 1/2" square, 14 gauge steel tubing painted white. Standard with five rails 5 1/2'H x 12'L. Each panel weighs 120 lbs. Custom lengths and colors are available. These panels have square corners so your horse has less risk of leg injury. Panels can be assembled into many different arrangements.

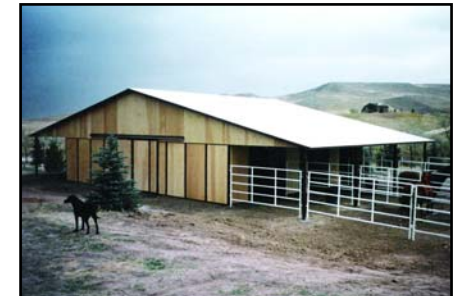

Every other panel comes with a double-eye connector for easier assembly on slopes or for "T-off" sections. Building attachments are available.

Corral Gates

Gates are the same construction as our corral panels, this section features a 5 1/2' walk through swing gate. Custom swing gates are available.
